RIGACAP

Beta Tester Guide

Everything you need to get started with RigaCap's AI-powered trading signals

April 2026

Welcome, Beta Tester

Thank you for being one of RigaCap's first users. You're part of a small group helping us refine a product we've spent years building — a stock signal platform powered by a 3-factor Ensemble strategy that has been walk-forward validated across 10 years of market data.

YOUR ACCESS IS COMPLIMENTARY

As a beta tester, your subscription is fully comped — you will not be charged. We've set up your account so you have full access to every feature, exactly as a paying subscriber would experience it.

In return, we ask one thing: **your honest feedback.** Tell us what's clear, what's confusing, what's missing, and what delights you. Your input directly shapes the product before we open to the public.

Getting Started

1

Sign Up

Visit **rigacap.com** and create your account. Your access is already comped — no credit card needed.

2

Take the Tour

A guided dashboard tour starts automatically on your first login. It walks you through every section.

3

Review Signals

Signals are informational only — you decide whether to trade and execute through your own broker.

Your Dashboard

Once logged in, you'll see a clean dashboard with everything you need. Here's what each section does:

Buy Signals

Fresh signals (green BUY badge) are new opportunities the Ensemble strategy identified today. **Monitoring** signals (gray) are stocks being watched for potential entry. Focus on the fresh signals first.

Open Positions

Shows currently tracked positions with real-time P&L, entry price, trailing stop level, and high water mark. The trailing stop automatically adjusts as positions move in your favor.

Simple / Advanced Mode

Toggle in the top-right corner. **Simple mode** shows essential signals and positions. **Advanced mode** adds momentum scores, regime data, and detailed analytics.

Market Regime

The current market regime (e.g., Strong Bull, Range Bound, Weak Bear) is displayed at the top. The strategy adapts its parameters automatically based on which of the 7 regimes is active.

Daily Workflow

RigaCap is designed to fit your schedule. Here's how a typical day works:

4:00 PM ET — Daily Scan
After the market closes, our system scans the full stock universe and runs the Ensemble strategy. New signals and position updates appear on your dashboard.

6:00 PM ET — Email Digest
A beautifully formatted email lands in your inbox with today's top signals, current positions with P&L, and any watchlist updates. Everything you need in one glance.

Intraday — Sell Alerts
If a trailing stop is triggered during market hours, you'll receive an immediate email alert so you can act promptly through your broker.

Your Action
Review the signals, do your own research, and decide whether to trade. Log in to your broker and execute any trades you choose. RigaCap identifies opportunities — you make the decisions.

What We Want You to Test

As a beta tester, your perspective is invaluable. Here are the areas where your feedback matters most:

SIGNAL QUALITY & TIMING

Do the signals make sense? Are they identifying stocks you'd consider? Do the entry points feel well-timed?

DASHBOARD CLARITY & USABILITY

Is the layout intuitive? Can you find what you need quickly? Is anything confusing or overwhelming?

EMAIL DIGEST USEFULNESS

Is the daily email helpful? Too much information? Too little? Would you change the timing?

MOBILE EXPERIENCE

Try the dashboard on your phone. Does it look good? Is it easy to scan signals on a small screen?

ANYTHING CONFUSING OR BROKEN

Bugs, typos, broken links, slow pages — anything that doesn't feel right, we want to hear about it.

Giving Feedback

The best feedback is specific. Here's how to send it:

EMAIL YOUR FEEDBACK

Send to: erik@rigacap.com

Include what you were doing, what you expected to happen, and what actually happened. Screenshots are extremely helpful — especially for UI issues or mobile problems.

Don't worry about being too critical — that's exactly what we need. A short "this confused me" is more valuable than a polite "looks good."

Frequently Asked Questions

Is this real money?

The signals are generated from real market data in real time. Whether you choose to trade based on them is entirely your decision. RigaCap does not manage funds, place orders, or hold any of your money.

How many signals should I expect per day?

Typically 2–4 fresh signals on active market days. Some days — especially during weak market regimes — there may be none. Quality over quantity is a core principle.

What broker should I use?

Any US brokerage works — Schwab, Fidelity, Interactive Brokers, TD Ameritrade, Robinhood, etc. RigaCap is broker-agnostic. You execute all trades yourself through your own account.

Will I be charged?

No. Your beta tester account is fully comped. You will not be billed during the beta period.

How long is the beta period?

We'll let you know as we approach public launch. You'll receive advance notice before any changes to your account status.

Can I share my account?

Please don't. Each beta account is tied to one person so we can correlate feedback with the specific experience you're seeing.

Disclaimer: RigaCap provides algorithmic trading signals and educational information only. We are not registered investment advisors and do not provide financial advice. Past performance, including walk-forward simulation results, is not indicative of future results. Investing in stocks involves risk, including the possible loss of principal. Always do your own research and consider consulting a licensed financial professional before making investment decisions.
