

Marketing is *filtration*, not conversion.

The job isn't to sell everyone. It's to route the **right buyer** to the **right tier** — the calm capital-preserver to Preserver, the growth-seeker to Maximizer — and to send everyone else away before they churn. This is how we do that.

TWO TIERS	DIRECTION	METHOD
Preserver / Maximizer	Momentum, around the drawdown	Walk-forward, honest

What We Are Actually Selling

RigaCap is a momentum stock-signals product built around one uncommon promise: **we manage the drawdown as carefully as the return**. Most momentum services sell the upside and bury the crash. We lead with the crash — because that's the reason to pay us.

Everything in this playbook flows from a single strategic idea our analyst review surfaced: the same product earns an **F for a "Market Maximizer" and an A for a "Capital Preserver."** The disappointed customer and the delighted customer bought the identical signals — the difference was *expectation*. So the marketing function's real work is not persuasion. It is **filtration**: setting expectations so precisely that the people who sign up are the people who stay.

POSITIONING CANON (KEEP USING THIS LANGUAGE)

"Behavioral capital insurance." The anti-capitulation engine. You are structurally buying a put option on your own worst instinct — the premium is paid in bull-run underperformance.

The two tiers, one engine

One regime-adaptive momentum engine, tuned to two risk appetites. We never expose the internal machinery in customer copy — only the outcome and who each tier is for.

BASE · FLAGSHIP

Preserver

"Keep the growth, cut the pain."

The calm, capital-preservation buyer ·
retirees · advisers · larger accounts.

13.0%

5-YR CAGR

1.28

SHARPE

-12.9%

MAX
DRAWDOWN

Owns the least risk. Gives up some ground in a smooth melt-up — that is the premium. Sells calm, not adrenaline.

GROWTH · ADD-ON

Maximizer

"Offense, with a seatbelt."

The growth buyer who can genuinely
stomach a rough year.

31.4%

5-YR CAGR

1.51

SHARPE

-14.9%

MAX
DRAWDOWN

Higher return, honestly disclosed tail.
Priced and positioned for investors who accept that a hard year is one they can hold through.

RULE FOR EVERY ASSET

Lead with **result + thesis**, never methodology. Say **"walk-forward"**, never "backtest." Never name internal strategy mechanics in public. "Survivorship-free" is internal table-stakes rigor — it stays out of customer copy.

Voice & The Language We Retired

Our category is loud, over-promised, and distrusted. We win on the opposite posture: **growth-forward but honest**. We state the upside plainly and we name the cost of each tier out loud. Honesty is not a compliance footnote here — it is the differentiator.

Kill list — do not use

RETIRED	WHY IT'S DEAD	USE INSTEAD
"Your edge, quantified"	Generic quant-cliché; says nothing about drawdown.	"Momentum, built around the drawdown."
"Beat the Market with AI-Powered Signals"	Over-promise + AI-hype; attracts churners.	Lead with the risk story, then the return.
"Ensemble" / single-strategy framing	We are a 2-tier product now, not one strategy.	Preserver & Maximizer.
Internal mechanic names in public	Proprietary; leaks the recipe.	Outcome + who it's for.
"Backtest"	Reads as curve-fit; understates the rigor.	"Walk-forward."

The honesty that sells

Name the premium

Preserver **trails in a smooth melt-up**. Say so. The buyer who hears it and still signs up is the buyer who stays through one.

Name the tail

Maximizer **owns a real drawdown tail**. Say so. Filtering out the person who can't hold it is a retention win, not a lost sale.

Signals only

"You execute at your own broker." In the dashboard, the tour, the landing page,

Who this is NOT for

A published section that repels the wrong buyer on purpose. Counter-

the welcome email. Sets the relationship honestly.

intuitive, and our single best churn-prevention tool.

TONE

Confident, plain-spoken, a little dry. We are the adult in a room full of hype. Data over adjectives. When we make a claim, we can point to the walk-forward record behind it.

The Proof Points

These are the **only** performance figures marketing may state (vintage 2026-07-31). If a piece needs a number that isn't here, omit it — do not invent.

Headline record — each tier vs. the market

TRACK RECORD	5-YR CAGR	5-YR MAXDD	21-YR CAGR	21-YR MAXDD
Preserver	13.0%	-12.9%	7.7%	-13.7%
Maximizer	31.4%	-14.9%	13.5%	-20.8%
S&P 500 (SPY)	14.2%	-25.4%	9.8%	-55%

Sharpe: Preserver 1.28 (5-yr) / 0.87 (21-yr) · Maximizer 1.51 (5-yr) / 0.93 (21-yr). All figures walk-forward.

The story that converts the risk-conscious buyer

Our sharpest proof point isn't the best year — it's how each tier behaves when the market breaks. This is the whole pitch for Preserver, and the "seatbelt" half of Maximizer.

STRESS YEAR	PRESERVER	MAXIMIZER	S&P 500
2008 (GFC)	+0.1%	+0.1%	-37.7%
2020 (COVID)	+9.2%	+34.9%	+15.2%
2022 (bear)	-11.2%	-6.4%	-19.9%

-1.05 PRESERVER DOWN-MONTH CAPTURE	-0.97 MAXIMIZER DOWN-MONTH CAPTURE	-3.85 S&P DOWN-MONTH CAPTURE	2.2y / 3.4y LONGEST UNDERWATER (PRES / MAX) VS SPY 5.4Y
--	--	--	---

The honest counterweight — how often we beat SPY

We publish this on purpose. It pre-sets the multi-year relative-underperformance expectation that prevents churn. A buyer who understands it before signing up doesn't cancel over it later.

Share of rolling windows where the tier beats SPY. Typical 12-mo return: Preserver +10.7% (77% of windows positive) · Maximizer +26.5% (77% positive). Typical 24-mo: Preserver +20.8% · Maximizer +57.5%.

Audience — Sort, Don't Sell

We don't have one persona. We have **two buyers with opposite emotional needs**, and the entire funnel's job is to route each to the tier that will delight them.

The Calm Preserver

45–65 · larger account · often near/in retirement · adviser-adjacent

Has real capital and has felt a real drawdown. Fears the crash more than they crave the melt-up. Wants to stay invested *and* sleep. Buys **Preserver**. Will happily underperform a raging bull if it means never living through –50% again. Sells them *calm and control* — the F1 driver's brakes, not the top speed.

The Growth-Seeker

30–50 · self-directed · higher risk tolerance · FinTwit-native

Wants return and can genuinely hold through a bad year. Systematic, skeptical of hype, respects a transparent record. Buys **Maximizer**. Sells them *disciplined offense* — momentum with a mechanical seatbelt, not a stock-tips newsletter.

THE FILTRATION TEST

Before publishing any asset, ask: **which buyer does this attract, and does it send the wrong one away?** A landing page that converts a Growth-Seeker into Preserver — or a nervous retiree into Maximizer — is a **failure**, even if it converts. Mis-sorted customers churn and leave bad reviews.

The adviser channel

Independent RIAs are a distinct, high-value channel (wirehouses won't approve us). Advisers fear **bull-market underperformance more than crash participation** — a career-risk asymmetry. So we position to them as a **10–20% sleeve of a client book, not a standalone strategy**, and we lead with the behavioral edge, the drawdown record, and client-education one-pagers. Credibility (a lengthening live record) is the gating constraint — this is a multi-year build, marketed patiently.

Where they pay attention

Paid discovery traffic is **predominantly mobile** — every public page and ad landing surface must be verified at phone width. On-thesis intent lives in capital-preservation and "should I sell / is the market safe" queries; that's where the Preserver story lands hardest.

The Social Engine

CHANNEL

Our content engine turns **real walk-forward trades into social proof**, on a reliable cadence, with a human approving every post. It is a channel, not a gimmick — its whole value is that the proof is real and the tone is honest.

The pipeline

Cadence & content mix

WINDOW	WEEKDAY	WEEKEND	CAP
Morning	9:00 AM ET	10:00 AM ET	Max 4 posts/day, spread 1–3 days out to avoid fatigue.
Midday	12:00 PM ET	2:00 PM ET	
Evening	5:00 PM ET	—	

Mix: **result posts** (the verified win, stated plainly) · **the drawdown story** (how a tier behaved when the market broke — our most on-thesis content) · **regime notes** (what the

market is doing, in plain English). Keep tier-appropriate: Preserver content sells calm; Maximizer content sells disciplined offense.

Guardrails — brand safety is the product

- **Human in the loop:** every post and reply goes through admin approval before it publishes.
- **No financial advice, ever.** Signals-only framing in every post.
- **Result + thesis, never mechanics.** Posts never leak internal strategy names or the recipe.
- **Honest by default:** we don't cherry-pick only wins; the drawdown story is a feature, not a thing to hide.
- **Anti-spam:** dedup so we never repeat the same account/symbol, rate-limited scans, no "Great post!" openers, no hashtag spam.

HIGHEST-LEVERAGE MOVE

The reply, not the broadcast. When a large account discusses a name our record already traded, a contextual, **proof-first** reply puts our real result into a conversation that's already happening — their audience, their context, our track record. Approval-gated, deep-link composed where the platform tier requires it.

Paid Acquisition & The Funnel

Paid spend amplifies the same filtration logic: proof-first creative, on-thesis keywords, and a landing experience that **sorts** the visitor before it asks for a card.

Creative angles that sort correctly

The drawdown story (Preserver)

"**+0.1% in 2008 while the market lost 37.7%. A -12.9% worst drawdown over five years — the index saw -25.4%.**"
Pulls the calm buyer.

Disciplined offense (Maximizer)

"**31.4% a year over five years — with a mechanical brake for the bad ones.**" Pulls the growth buyer who can hold a tail.

Proof-first

"Our record flagged it before it ran. Here's the walk-forward track record." Links to the public track-record page.

Anti-hype

"**Not another stock-tips newsletter. Momentum, built around the drawdown.**"
Differentiates from the noise, repels the lottery-ticket buyer.

On-thesis keywords & negatives

Bid into capital-preservation and "is it time to sell / is the market safe" intent — the Preserver buyer's exact search. Guard the on-thesis queries: negative-match the junk, but **don't over-negate** — e.g. block "most volatile stocks" without killing "is the market volatile now," which is on-thesis anxiety.

The funnel

MEASUREMENT CAUTION

Analytics is consent-gated, so decliners are invisible and "0 conversions" is often a **measurement gap, not a dead funnel**. Confirm conversion actions are actually imported (linking ≠ importing) and check whether paid clicks reach the buyer stage before concluding the creative failed. Ensure checkout reflects the **current** price, not a stale value.

Retention — Where Filtration Pays Off

A correctly-sorted subscriber is a retained subscriber. Retention starts at the ad and is **locked in during onboarding**, before the first relative-underperformance stretch can rattle them.

Set expectations before they can break

Onboarding drip

A multi-step sequence that teaches how signals work, sets **multi-year relative-underperformance expectations** up front, and reinforces the tier's promise. The single highest-leverage churn prevention.

Daily signal email + dashboard parity

The email and the dashboard show the **same** signals, always. Inconsistency erodes trust faster than any single bad call.

"Your RigaCap Journey"

Personalized what-if from signup date vs the market — makes the value tangible and gives the subscriber something honest to share.

Real-time exit alerts

The exit discipline delivered when it fires, using the **live** exit rule — never a stale value the subscriber can't actually act on.

PARITY IS NON-NEGOTIABLE

Anywhere the UI, an email, or a post states an exit or a parameter, it must be the **current live value**. If a subscriber can't reproduce the marketed result because a surface shows a stale number, that's a retention bug and a credibility bug at once.

Referral & win-back

"Give a month, get a month" — unique codes, coupon at checkout, referrer rewarded on trial-to-paid conversion, surfaced in the welcome email and a dashboard modal. Win-

back offers are **serialized, never shared codes**. On the roadmap: a cancel survey and usage-based churn signals to catch at-risk subscribers before they leave.

Roadmap & What We Measure

Sequencing

- **Now — Two-tier positioning everywhere**

Every public surface reflects Preserver + Maximizer, the honesty posture, and the retired-language kill list. Kill any lingering single-strategy or "backtest" language.

- **Now — Social engine on cadence**

Result + drawdown-story + regime posts, approval-gated, tier-aware. Contextual replies as the highest-leverage move.

- **Next — Social proof & testimonials**

Real subscriber results on the landing page. Founding-cohort social proof once the live record supports it.

- **Next — Adviser motion**

Sleeve-framed /for-advisers with the re-entry trigger, a 60/40 sleeve illustration, underperformance honesty, and client-education one-pagers.

- **Later — Content / SEO & churn program**

Long-form market commentary for organic discovery; cancel survey, usage alerts, and win-back sequences.

KPIs

METRIC	TARGET	WHY IT MATTERS
Landing → trial	3–5%	Funnel efficiency — but read alongside sort quality, not alone.
Trial → paid	3–5%	Did we attract real buyers, or tire-kickers?
Monthly churn	<5%	The filtration scoreboard. High churn = we're mis-sorting buyers.
Tier mix & tier-level churn	Track	Are Preserver buyers landing on Preserver? Mis-sort shows up here first.
Social engagement (AI vs template)	A/B	Which proof format actually earns attention.
Trade → published post latency	<48h	Keeps social proof fresh and credible.

THE ONE NUMBER THAT MATTERS MOST

Churn is the truth-teller. Conversion rate measures how well we persuade; churn measures how well we **sorted**. If churn climbs while signups hold, the marketing is working and the filtration is failing — fix the sort, not the funnel.

RigaCap — Marketing & Growth Playbook · Confidential, internal use only · Rev. August 2026

All performance figures are walk-forward results with zero hindsight bias (vintage 2026-07-31). Signals only — subscribers execute at their own broker. Past performance does not guarantee future results. Not financial advice.
